

## PRESS RELEASE

New THOR Pump Range

May 2011

## NEW THOR PUMP RANGE

### RELEASE YOUR POWER !

The new THOR extrusion pump range focuses Kremlin Rexson know-how, Experts in Finishing and Dispensing Solutions.

THOR extrusion units – manual single component unheated applications - are specially designed for pumping viscous materials in many markets such as building and earthmoving equipment, solar energy, pleasure boats...

The **unique design and power** enables to process a wide range of materials including greases, adhesive and sealants with a viscosity up to 1 million centipoises.

THOR **modular range** offers a solution meeting most applications: they are available on single, mini twin or double post rams. A large choice of accessories (carts,...) are available to meet customer needs.

THOR range offers **simplicity** and reduces operation costs by minimizing product wastage giving the customer benefits of a **fast payback while protecting the environment**.

The innovative design and quality of engineering bring reliability and performance reducing the cost of ownership to a minimum.

THOR units are the very first extrusion units featuring the new Kremlin Rexson design and new colour increasing dynamism and visibility in the factory.
